

# JAYYANT JAJU

[jayyant.github.io](https://jayyant.github.io) | [jayyantjaju@gmail.com](mailto:jayyantjaju@gmail.com)

## EDUCATION

Manipal Institute of Technology  
**B.Tech** in Computer Science and Engineering  
(spec. Cyber Security)  
2023 - 2027 | Bengaluru, India

## SKILLS

**Technical:** Python, HTML, CSS, JavaScript, C++, C, Linux, git, React

**CyberSecurity:** NMap, Wireshark, Intrusion Detection, Cipher Algorithms, RSA, AES-DES

**Software:** Adobe Photoshop, Adobe Premiere Pro, Aseprite

**Game Engines:** Godot, Unreal Engine

## COURSEWORK

Data Structures & Algorithms  
Object-Oriented Programming  
Database Management Systems  
Design & Analysis of Algorithms  
Advanced Cryptography  
Cyber Security & Forensics  
Number Theory & Cryptography

## LINKS

[Leetcode://scuffyD](https://leetcode.com/scuffyD)

## CLUBS & ACTIVITIES

Part of the Organizing Committee for 'Falak', MIT's yearly cultural fest

## PROJECTS

### Encryption Checker

[\[project link\]](#)

- Extended a React/Node.js chat app with LAN hosting and connectivity fixes.
- Integrated RSA + AES-CBC hybrid encryption for secure message transit.
- Built a browser tool to audit traffic encryption, validated with Wireshark.

**Tech stack:** JavaScript, React, Node.js, Socket.IO, node-forge, Wireshark

### Sudoku Solving Bot

- Developed a Python-based Sudoku solver using OpenCV, PyAutoGUI, and NumPy to detect Sudoku grids from live screenshots, recognize board states, and autonomously solve browser-based puzzles.
- Implemented a hybrid rule-based and reinforcement learning approach that iteratively improved solving strategies over successive training generations, enhancing accuracy and performance.

**Tech stack:** Python, OpenCV, PyAutoGUI, NumPy, Reinforcement Learning, Computer Vision, Image Processing

### Renegade (2D Video Game)

[\[project link\]](#)

- Designed a 2D RPG-Platformer game in the **Godot game engine** in **7 days**
- Made for **Brackeys' Game Jam 2025.1**, a game development contest with over 2,000 entries
- All character assets were created in **Aseprite** and **Photoshop**
- Gained experience in environment building and finishing gameplay loop
- Optimized player experience by fixing bugs and thorough play testing
- Game ratings: <https://itch.io/jam/brackeys-13/rate/3349960>

**Tech stack:** GDScript, Godot, Aseprite, Photoshop

### Degrees to Death (3D Video Game)

[\[project link\]](#)

- Developed a 3D Survival/Immersive Sim/Psychological Thriller game in the **Godot game engine**
- Developed custom **RigidBody3D** player movement, force application, linear damping overrides, and physics-based object carrying mechanics in Godot.
- Implemented persistent resource-driven state management, multi-scene flows, video playback integration, and interactive in-world computer terminal systems.

**Tech stack:** C++, Godot, Blender, Photoshop, Adobe Premiere Pro, Bandlabs

## EXPERIENCE

### AiCade | JS Developer, AI Game Developer Internship

Jun '25 - Sep '25 | Bangalore, India

[\[Internship certificate\]](#)

- Developed modular 2D browser games in **JavaScript**, creating reusable gameplay systems, UI components, and optimized assets to support rapid prototyping and maintainable codebases.
- Collaborated with a team to conduct playtesting, A/B testing, and iterative improvements while following standardized development practices to enhance gameplay balance, user experience, and AI-editable game structures.

**Tech stack:** JavaScript, HTML5, Adobe Photoshop, Aseprite

## CERTIFICATIONS

Web Development Fundamentals - IBM SkillsBuild
